

# Tip on Human Head Proportions (HiroX)

## Preview:

This study is useful for drawing heads in perspective in a very simple fashion. Proportions is the key here!

*Synonyms: Proportions, head, head proportions, perspective*

The main deal with proportions is to remember the three divisions: Forehead, Nose, Mouth. ( Lips are almost half between what has been defined as mouth region). This can significantly help you drawing faces in perspective. Of course the proportions can differ by different facial structures or art styles but I usually keep this proportion for my standard face.

Remember the proportions
